

# Typical use cases in pharmaceutical industry

# Drug development and production

## Drug Discovery/Manufacturing

- Pattern Recognition with learning methods
  - AI can perform quality control
- 

## Image recognition

- medical imaging techniques
- evaluate images of DNA or Protein gels

# Drug development and production

**Perform predictive maintenance**  
with error recognition of machinery

---

**Reduce materials waste**  
by finding new production pathways

---

**Optimize energy use**

# Sales

**Forecast demands**

**Customer analytics**

# Typical use cases in automotive industry

# Car and parts

**Perform predictive maintenance**  
with error recognition

---

**Model part reliability for new car**  
models

---

**Model and optimize fuel efficiency**

# Car and parts

## **Computer vision**

for e.g. autonomous driving or  
environmental safety

---

## **Reinforcement learning**

# Sales

**Forecast demands**

**Customer analytics**

# Typical use cases in semiconductor industry

# Semiconductor Analysis

**Reduce materials waste by finding new production pathways**

Increase yield of semiconductor from available wafers (multi parameter optimization)

---

**Analyze possible errors**

from previous chip models prior to chip design

# Semiconductor Analysis

**Computer vision for wafer inspection**  
(perform quality control)

---

**Forecast demands**

---

**Optimize energy use**

# Sales

**Forecast demands**

**Customer analytics**
